

Steps To A Better Application:

1. **TUF-TRAC® RESURFACER (asphalt bases)** - Creates a good working base. A dense silica particle-enriched acrylic coating provides the ideal subsurface for the total system.
2. **TUF-TRAC® CONCRETE PRIMER (concrete bases)** - Creates sound adhesion between the concrete and the TUF-TRAC top coat for a durable, wearable, long-lasting surface.
3. **TUF-TRAC® LATEX CRACK FILLER** - TUF-TRAC will fill most of the hairline cracking on an existing surface, TUF-TRAC CRACK FILLER will repair those voids while remaining flexible so that it will move with minor expansions and contractions of your surface.
4. **TUF-TRAC® PATCH** - Fast drying binder for patching both asphalt and concrete bases. When mixed with Portland cement and silica sand it forms a high strength durable surface.
5. **TUF-TRAC®** - Color and texture combined. Deep, rich colors and precise silica sand particle sizing give the court its beauty and playability.
6. **TUF-TRAC® LINE STRIPE** - The finishing touch. Vibrant white and specially textured, the lines apply with crisp, sharp edges.

TUF-TRAC® has a variety of applications...

- Walkways, patios and driveways
- Ramps and handicapped access points
- Steps, porches and floors
- Laundry and mudroom floors
- Pool decks
- Basement floors

Surface Care

To maximize the appearance and playability of your quality Tuf-Trac court surface, we recommend the following:

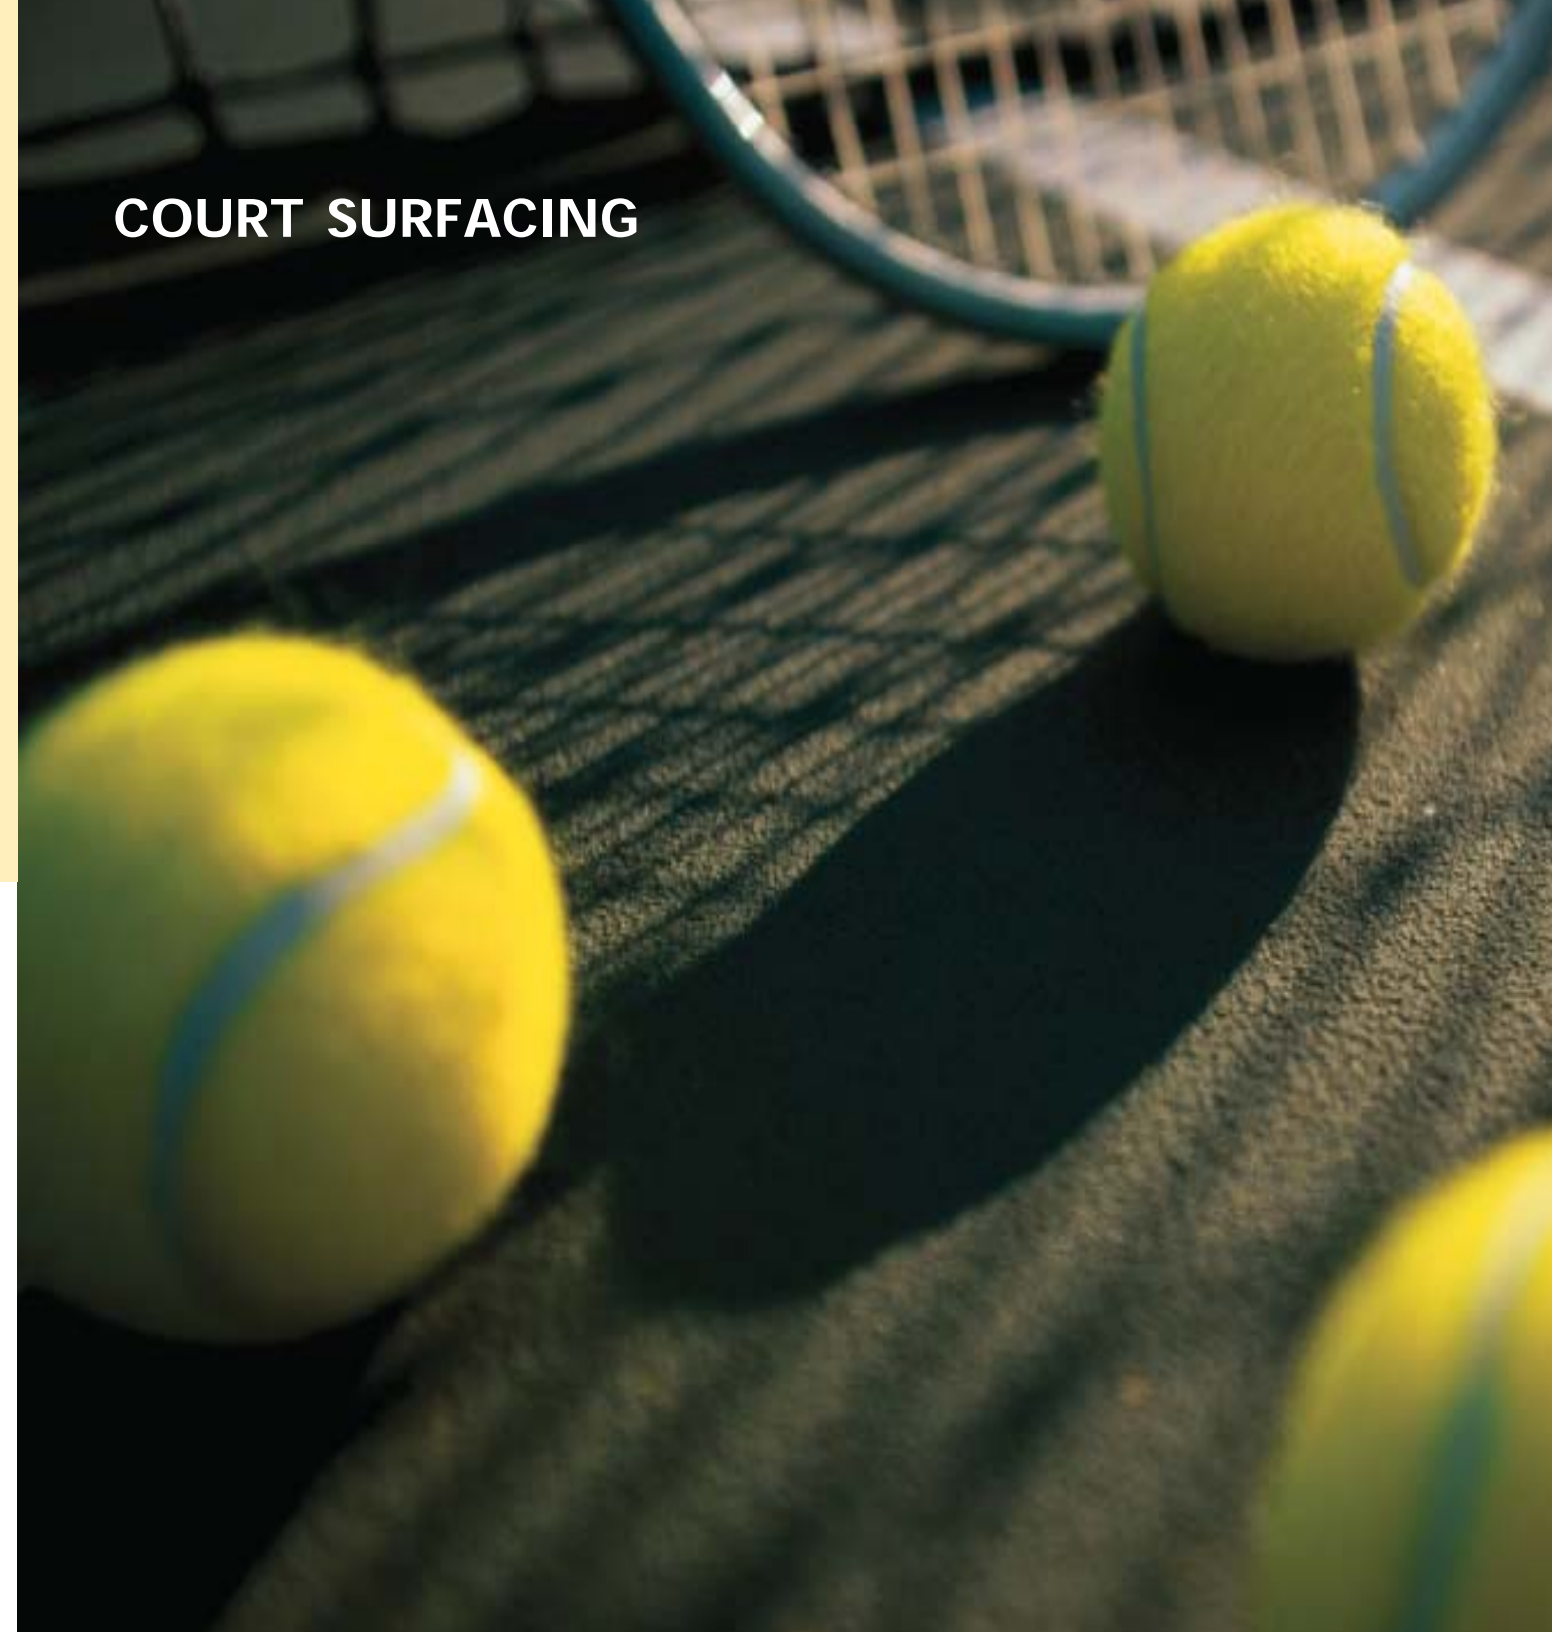

1. **Clean your court regularly.** Thoroughly clean entire court monthly, paying special attention to shady areas where mold and mildew may grow. To clean these areas, dilute household bleach (two parts water to one part bleach) and spread the solution over the affected area. Scrub lightly with a broom and then rinse thoroughly.
2. **Remove standing water.** Dirt that accumulates in standing water after rain showers can leave stains behind. Prompt removal of these "birdbaths" eliminates this problem. Also, be careful to avoid overspray from irrigation systems surrounding the court surface.
3. **Remove foreign matter promptly.** Acids and resins from leaves and pine needles can stain and prematurely deteriorate the court surface. Remove leaves and other organic matter frequently to avoid damage.
4. **Handle with care and proper equipment.** Hard scrubbing can lead to court surface damage. Use soft nylon or hair-type brooms, and never use pressures of more than 70 psi when cleaning with a garden hose or water broom. Your Tuf-Trac® installer can provide you with all the necessary equipment to extend the life of your tennis court.

COURT SURFACING

No Skidding. No Kidding.

Tennis Anyone? Your players and clients will gain excellent traction and enhanced spin with our exceptional court surface – Sandstrom Tuf-Trac®. Rich, low-sheen colors, proven surface durability and professional installation complete the combination. The result is an ideal team for great tennis - game, set and match!

With Tuf-Trac®, the Ball's in your Court!

To create the ideal tennis surface, Sandstrom Tuf-Trac® contains a unique blend of silica particles and specially selected fibers. The result is a high profile textured finish that provides unmatched playability for all players, whether they're recreational or professional. When players, turn, stop or accelerate, Tuf-Trac® provides a tight grip underfoot. And volley after volley, Tuf-Trac's® high-profile texture serves up greater ball control.

For enhanced comfort and enjoyment, apply Sandstrom Tuf-Trac® cushion products. The Sandstrom Tuf-Trac® system reduces impact shock, which lessens premature muscle fatigue often associated with conventional asphalt or concrete court surfaces.

Reduce Glare with Rich Colors

A wide range of specially-formulated colors reduce glare and improve ball visibility, particularly when the sun is low in the sky. Sandstrom's Tuf-Trac® color palette is designed to mix and match. Select your individual color combinations to complement surrounding color schemes. Precision matched colors are also available.

Play for Keeps with Tuf-Trac®

For court managers, lasting durability is the true reward. The Sandstrom Tuf-Trac® system delivers on all counts, using the newest acrylic technology backed by more than 30 years of industry success. Even in the most demanding climates, strengthening fibers and exceptional UV stability have earned the Tuf-Trac® international acclaim. All Sandstrom products are manufactured in an ISO 9001 registered facility where each step of the formulation process is closely scrutinized and monitored. These steps produce the highest quality court surface available today.

The Grand Slam - Professional Installation

Sandstrom Tuf-Trac® installers are sport-surface professionals, bringing years of athletic surfacing installation experience and knowledge to your court. Each installer is well versed in the entire Sandstrom Tuf-Trac product line. Sandstrom quality products and professional installation– it's a grand slam combination for ensuring exceptional beauty and playability year after year.

Whether you are building or resurfacing, choose Sandstrom Tuf-Trac® coatings – and take your court a step ahead!
